

# Psychology

## Associate in Arts Degree

### Why Psychology?

Are you interested in why people do the things they do? Maybe you're curious about memory or personality or the way we change across the lifespan, or how we make decisions.

Perhaps you've wondered about how the brain works or how groups influence us or the causes of psychological disorders. Psychology is a specialty area in the social and behavioral sciences that studies behavior and mental processes and can provide insights that are valuable for both our personal and professional lives.

### Why Bay College?

The Psychology program at Bay College is designed for students to transfer to other colleges and universities as well as serve as the foundation for students who major or minor in psychology. But whether you are majoring in psychology or not, the first course you take is PSYC 201 Introduction to Psychology which gives you a broad survey of contemporary scientific psychology.

### Beyond Bay College

Students interested in transferring to a four-year institution to obtain a bachelor's degree or higher may find opportunities in the following areas of study:

- **Clinical Psychology**
- **Education**
- **Counseling**
- **Neuroscience**
- **Clinical Psychologist**
- **Special Education**
- **Training and Development**
